Precipitation probability					
90%	60%	30%	30%	30%	10%

Forecast for Wednesday 26 Aug 2020

Weather: Cloudy with outbreaks of persistent rain continuing at first with gales possible too, although rain and winds gradually easing over time. Becoming drier from mid-morning but staying cloudy, with the possibility of further rain and drizzle at times. Winds continue to become lighter into the afternoon with the odd sunny spell breaking through, mainly in the west. Dry with clear spells through the evening with gentle winds.

Chance of cloud free mountain/hill tops above 600m: 30% chance in the morning with broken cloud obscuring hills above 400-500m. Cloud lifting during the morning with bases mostly above summits through the afternoon and evening (90%).

Visibility: Generally good or very good by day with distant peaks easily identifiable. Occasionally poor in rain overnight and early on Wednesday morning, with nearby hills appearing feint, or ill-defined.

Meteorologist's View

Wind gusts on exposed hilltops may reach 40mph during the early hours of Wednesday morning before easing gradually though the day.

Recent rainfall: measured at Malham: altitude 375m

Recorded at	Last 24 hours:	Last 48 hours:	Last 72 hours:
02:00 on Wed 26 Aug 2020	5.8mm	8.2mm	12.8mm

Forecast for Thursday 27 Aug 2020

Weather: Clear spells and light winds, but an increasing risk of showers overnight with increasing cloud. Rather cloudy with some showers or longer spells of rain through the day, likely continuing into the evening and some of which could be heavy at times.

Maximum wind: South to south-westerly 10-15mph, with gusts to 20mph.

Chance of cloud free mountain/hill tops above 600m: 90% at first overnight, but 40% later with rather frequent patches of broken cloud to 400m. 60% through much of the morning and afternoon, but becoming 40% by the evening.

Visibility: Mostly good or very good again outside of cloud, with clear sight of nearby and distant hills. Occasionally poor with showers or rain obscuring some nearby hills.

Temperature: **Valleys:** Plus 11 becoming Plus 15 Celsius.
At 600m: Plus 9 becoming Plus 12 Celsius.
Freezing level: Above the summits.
